

Could Your Dog Or Cat Be The Next Hero?

About The Blood Bank Program

The IndyVet Blood Bank, provides canine and feline blood for use at veterinary practices throughout Indiana and across the country.

Blood is used by IndyVet and other veterinary hospitals for transfusions during emergency treatments, major surgeries and anemia.

IndyVet's Canine and Feline Blood Bank collects, separates, and stores blood. Each unit of whole blood is broken down into packed red blood cells and plasma. Nothing is wasted and each unit can save 2-4 pets. Packed red blood cells have a shelf life of 42 days, while plasma can be stored for five years.

Having fresh prepared blood product allows IndyVet to treat many life threatening emergencies immediately. This is one factor that allows IndyVet to provide superior services.

Requirements

Canine & Feline Donors

Donors must meet stringent requirements:

- Must be between 1 - 8 years of age;
- Must be 35 pounds minimum weight (dogs) or 9 pounds (cats);
- Must be in good general health and current on all vaccinations (proof is required);
- Must be taking heartworm preventative medication (dogs);
- Must pass a comprehensive blood screening, blood typing and infectious disease screen.

Benefits

Pet owners participating in the blood donor program receive several perks. Each qualifying donor receives:

- A complimentary, comprehensive physical exam and yearly blood work

Approved donors who commit to the minimum number of annual donations receive at no charge:

- An annual examination
- Annual vaccines
- Heartworm testing
- 40% discount on heartworm and flea medications
- 20% discount on emergency and specialty services.
